COURSES

Master of science
Jagannath University
- Specialized in Machine Learning, Data Science, Computer Vision
- Completed a project titled: *"Image Caption Generator"* under the supervision of Dr Selina Sharmin
- Gained practical experience in **Python, TensorFlow, CNN-LSTM models**
- Participated in seminars, workshops, and academic presentations

PROFILE

A highly motivated and detail oriented computer science graduate with a strong foundation in programming,database,management and computer vision, seeking a challenging role in software development or data analysis where I can leverage my technical skills and contribute to innovative projects. Passionative about continues learning and problem-sloving in a dynamic work environment.

SKILLS

Frontend Development
HTML5, CSS3

Database Management
- MySQL / PostgreSQL
- Hosting & Deployment (cPanel, Heroku, AWS, Vercel)

Backend Development
- Python (Django / Flask)

Other Relevant Skills
- API Integration (REST, third-party APIs)
- Web Performance Optimization
- Web Security (HTTPS, Input Validation, SQL Injection Prevention)
- CMS Platforms (WordPress, Joomla)
- Debugging & Testing (Chrome DevTools, Postman, Unit Testing)

LANGUAGES

Bangla ●●●●●
English ●●●○○

PROJECTS

Temperature Converter
Description:
Developed a dynamic temperature converter tool using **HTML, CSS, and JavaScript** that allows users to convert temperatures between Celsius, Fahrenheit, and Kelvin in real-time. The application features a simple and user-friendly interface with input validation and immediate output display.
Key Features:
- Real-time conversion between Celsius, Fahrenheit, and Kelvin
- Clean, responsive UI using CSS Flexbox
- JavaScript-based logic for instant calculation without reloading
- Demonstrated ability to build functional user interfaces with real-time data processing

Impact:
- Strengthened understanding of DOM manipulation and event handling
- Improved problem-solving and debugging skills in JavaScript
- Demonstrated ability to build functional user interfaces with real-time data processing
- Used by peers as a reference tool in class and practice sessions

Image Caption Generator
Description:

Designed and implemented a deep learning-based system that automatically generates descriptive captions for images by combining computer vision and natural language processing techniques. The model architecture integrates a **Convolutional Neural Network (CNN)** for image feature extraction and a **Long Short-Term Memory (LSTM)** network for sequential caption generation.

Key Components:

- **CNN (Xception)** used to extract high-level visual features from input images
- **LSTM** network trained on textual data to generate grammatically correct captions
- Trained on the **Flickr8k** dataset consisting of 8,000 images and five captions per image
- Preprocessed images and text using techniques like tokenization, padding, and feature vectorization
- Implemented using **Python, Keras, TensorFlow, and NumPy**

Impact:

- Successfully generated accurate and contextually relevant captions for unseen images
- Achieved improved BLEU scores through model tuning and dropout regularization
- Gained hands-on experience in model training, hyperparameter tuning, and sequence modeling
- Strengthened practical knowledge of deep learning workflows and dataset preparation
- Presented project during academic pre-defense with positive feedback from faculty and peers

CERTIFICATES

- Python for data science and machine learning
- Deep learning specialization

INTERESTS

Cooding — Description: • Passionate about coding as a creative and problem-solving activity. Regularly build small projects to explore new frameworks, algorithms, and technologies. Enjoy participating in online coding challenges, contributing to open-source, and learning through hands-on experimentation. • **Activities Include:** • Developing mini web apps (e.g., temperature converter, to-do list, calculator) • Practicing algorithms and data structures on platforms like LeetCode, HackerRank, or Codeforces • Exploring new languages and tools such as Python, JavaScript, and Git • **Outcome:** • Improved logical thinking and debugging skills • Built a strong foundation in programming fundamentals • Gained confidence in applying coding to practical projects and research
